

I support XM's ability to provide Instant Traffic and Weather. Furthermore, I strongly object to any organization, especially a special interest group like to National Association of Broadcasters, to limit our choices in a "free market" society. If I am willing to pay for XM services why should the government prevent my doing so. I think that the FCC should reject NAB's petition 04-160 and allow free enterprize to work.  
Thank you.
